

Homework: Logic Programming

Learning Objectives:

1. Problem solving using logic programming paradigm
2. Prolog programming

Instructions:

- Total points 36 pt
- Early deadline: Apr 21 (Wed) at 11:59 PM; Regular deadline: Apr 23 (Fri) at 11:59 PM (or till TAs start grading the homework)
- Download and install Swi-prolog <http://www.swi-prolog.org/>
- Please zip .pl files and output files (e.g., screenshot) for all the solutions and submit it to Canvas.

Questions:

1. (3 pt) Understand the following Prolog program:

Given:

```
mystery([], []).
mystery([H|Tail], [H, H|DTail]) :-
    mystery(Tail, DTail).
```

What would Z be in `mystery([1, 4, 6], Z)`.

2. (10 pt) Prolog programming:

- (4 pt) [Prolog for numbers] Write a Prolog program to compute GCD of two numbers.

Example:

```
1 ?- gcd(10, 6, X) .
2 2 .
3 ?- gcd(10, 5, X) .
4 5 .
```

- (6 pt) [Prolog for list] Write a Prolog program to duplicate the elements of a list a given number of times.

Example:

```

1  ?- duplicate([a,b,c],2,X).
2  X = [a,a,b,b,c,c].
3  ?- duplicate([a,b,c],3,X).
4  X = [a,a,a,b,b,b,c,c,c].

```

3. (5 pt) [Prolog for integer constraints] Write a Prolog program to generate the integer values of x , y and z that can satisfy the constraints in the following C program. If no such values can be found, return **false**.

```

1  if (2x == y) {
2      if (y == x+ 10)
3          z = x+y;
4      else
5          z = x-y;
6  }

```

4. (6 pt) [Prolog for logic puzzle] Write a Prolog program (including the query) to solve the following logic puzzle:

Five people were eating apples, A finished before B, but behind C. D finished before E, but behind B. What was the finishing order?

5. (12 pt) [Prolog for parsing] Write a Prolog program for parsing:

- (a) (7 pt) Consider the grammar we worked in HW1 below. Write a Prolog program that parses strings using this grammar. Your program can be used to check if a given sentence can be generated by the grammar. An example interpreter session is provided below.

Grammar:

- terminals: $x, y, z, >, <, 0, 1, +, -, =$, if, then, else
- non-terminals: S, F, B, T, E, N
- start symbol: S
- production rules:
 - $S \rightarrow F|T\ N\ T$
 - $F \rightarrow \text{if } B \text{ then begin } S \text{ end} \mid \text{if } B \text{ then begin } S \text{ else } S \text{ end}$
 - $B \rightarrow (T\ E\ T)$
 - $T \rightarrow x|y|z|1|0$
 - $E \rightarrow > \mid <$
 - $N \rightarrow + \mid - \mid =$

Example:

```

1
2  | ?- sentence([if,'(', x, > , 0,')', then, begin, [x, =, 1], end]).
3  | true.

```

```
4 | ?-sentence([if, '(', x, >, 0, ')'], then, begin, [x, =, 1], end, else, begin, [x,  
    =, 0], end]).  
5 | true.  
6 | ?sentence([if, x, >, 0, then, begin, [x, =, 1], end]).  
7 | false.  
8 | ?- sentence([if, x, >, 0, then, begin, '(', [x, =, 1], ')'], end, else, (x, =,  
    0))).  
9 | false.
```

- (b) (3 pt) Write the query to generate all possible sentences that can be derived from the grammar. Show the screenshot of 3 sentences.
- (c) (2 pt) Does the order of the sub-goals in your rules make a difference?
